SUMMARY

As a results-driven software engineer with a strong foundation in web technologies and proven problem-solving abilities, I am committed to driving significant returns on investment through innovative and efficient solutions. My creative approach to challenges, combined with a willingness to continuously learn new technologies, ensures I stay at the forefront of the industry. I thrive in expert teams and collaborative environments, consistently delivering high-quality software solutions that contribute to business growth and success. Eager for new challenges, I am dedicated to leveraging my skills to propel my career and maximize impact.

PROFESSIONAL EXPERIENCE

Full Stack Developer & Instructor - Part Time **August 2025 – Present**
BonianTech & Egyptian Syndicate Engineers

- Collaborating with BonianTech and the Egyptian Engineers Syndicate to develop and deliver the Election Management System project.
- Building full-stack solutions using ASP.NET Core, Angular, and SQL Server, with focus on performance, scalability, and real-time updates using SignalR.
- Conducting training sessions for engineers on modern web development, clean architecture, and software best practices.

Technologies

- .NET Core, C#, Entity Framework, SQL Server, Angular, SignalR, ADO, REST APIs, JWT, Azur, CI/CD, Github actions.

Front End (Angular developer) - Part Time **August, 2025– Present**
PlatX Software

- Worked as part of the core frontend team to develop and enhance a Learning Management System (LMS) .
- Used the latest Angular versions to build dynamic, scalable, and high-performance UI components.
- Developed reusable components, routing modules, and optimized state management using RxJS and Signals.
- Participated in feature planning, testing, and deployment cycles for continuous improvement of the LMS SaaS platform.

Technologies

- Angular, Typescript, RxJS, Signals, HTML, CSS, Bootstrap, Angular Material, REST APIs, SignalR, Git

Full stack developer - Part Time **September, 2024– Present**
Hesham Tarek Engineering Solutions

- Modernized a high-traffic legacy system by upgrading from .NET Framework 4.8 to .NET Core/.NET 8, resulting in up to 40% faster API response times and improved scalability for thousands of users.
- Refactored outdated code into clean, modular architecture, reducing technical debt and improving maintainability — leading to 30% faster feature development and 20% fewer production bugs**.**
- Implemented global exception handling and centralized logging (Serilog, ILogger)**,** improving error traceability and reducing debugging time by 50%.

- Enhanced an Angular admin dashboard, improving UI responsiveness and workflow efficiency for internal teams, resulting in 25% faster admin operations**.**
- Built and optimized RESTful APIs used by mobile, desktop, and dashboard clients, improving system reliability and supporting a growing user base of 20,000+ active users**.**

Technologies:

- Angular, SignalR, TypeScript, .Net, REST APIs, Clean Architecture, SOLID,, JWT, Git, Linux,

Coding Instructor - Contract **June, 2024– December, 2024**
Iscool Career

- Developed innovative teaching methods, including interactive coding exercises and gamified learning, to keep students engaged.
- Tailored lesson plans to individual needs, ensuring personalized learning experiences and progress.
- Delivered complex programming concepts clearly using real-life examples to enhance understanding.
- Facilitated hands-on coding sessions and collaborative projects to apply theoretical knowledge.

Front End developer - Full Time **Sep, 2022- Sep, 2024**
BySmart SoftWare

- Worked on an ERP project, collaborating with a team of developers to deliver high-quality software solutions.
- Solved a problem in the payment method by implementing a tree parent and children structure, tracing code, and fixing errors.
- Developed a dynamic dashboard to provide real-time data visualization to users.
- Created a chat feature in the application using SignalR connection to enhance communication.
- Enhanced various reports to provide users with insights into the system's performance.
- Provided technical support and guidance to clients during project implementation and maintenance phases, ensuring a smooth and successful transition to the new system.

Technologies:

- Angular, html, css, bootstrap, SignalR, PrimeNg, Git.

Full stack Developer Intern **June, 2021– Aug, 2021**
Route Academy

- Worked on various projects, including ecommerce, movies, notes, and news projects, as a front-end developer using Angular framework and technologies such as HTML, CSS, JavaScript, Bootstrap, Sass, and Typescript.
- Gained experience in server side technologies (back-end development), using Microsoft SQL Server database, C#, LINQ, and Entity Framework.
- Participated on MVC projects and RESTFUL API, such as Talabat project(E-commerce) and Employee system.

Technologies:

- .NET Core, C#, Entity Framework, SQL Server, REST APIs, MVC, JWT, Git, Angular, html, css, JavaScript, bootstrap, SignalR, Stripe, Redux.

Technical Skills

- Client-Side Technologies: Angular, HTML, CSS, Bootstrap, Tailwind, Angular Material, PrimeNG, JavaScript, JSON, JQuery, AJAX, RxJS, signals, NgRx.
- Server-Side Technologies: .Net, ORM, ADO, Dapper, Entity Framework core, NodeJs, ExpressJs, REST APIs, Web Sockets, Clean Architecture.
- Programming Languages: c#, c++, JavaScript (ES6+), Typescript.
- Database: SQL: MongoDB, Microsoft SQL Server, PostgreSQL, NoSQL
- MicroServices.
- Linux, CI/CD, Docker, AWS, Azure, Git, Github.

EDUCATION

Bachelor of computer science and information **Sep, 2019-July, 2023**
Zagazig University
Graduation Project: Telemedicine

- GPA: 3.67/4.00 (Excellent with Honors)
- Graduation Project: Telemedicine
- Role: Team Leader
- Description: Led a team of 6 developers to design and develop a comprehensive telemedicine system that enables
- Remote patient-doctor consultations and medical record management.
- Competitions and Achievements: ICPC Competition: Participated in the International Collegiate Programming Contest (ICPC), where I developed strong problem-solving and algorithmic skills

Projects

ERP Project:

- Worked closely with customers to understand their business requirements, providing solutions that met their needs.
- Developed a dynamic dashboard to provide users with real-time data visualization.
- Added a restaurant module to the system, consisting of six screens (hall, data-table data, staff data, open treasury,

Close treasury, restaurant sales).

- Implemented a tax component into the restaurant module to ensure accurate tax calculations for clients.

Technologies:

- .NET Core, C#, Entity Framework, SQL Server, JWT, Git, Angular, html, css, bootstrap, SignalR, PrimeNg.

Courses Application with Dashboard

- Designed and implemented the full-stack solution using Angular (frontend) and .NET (backend), delivering a responsive and seamless user experience.
- Built robust Restful APIs and optimized database interactions to ensure high performance and reliability.
- Managed and secured a Linux-based production server, improving uptime and scalability.
- Resulted in a rapid user growth surpassing 10,000 active users, with significant improvements in engagement and course completion rates

Technologies:

- .NET Core, C#, Entity Framework, SQL Server, REST APIs, Serilog, JWT, Git, Linux, Angular, html, css, bootstrap, SignalR.

Telemedicine Project:

- Led the development of a comprehensive telemedicine system using a three-tier architecture and repository design pattern.
- Created a booking appointment feature for patients to schedule appointments from anywhere.
- Implemented a video conference feature using ASP.NET RESTFUL API that allows patients to have virtual meetings with doctors.
- Developed a direct connection between Radiology devices and medical treatment providers using Angular for faster and more accurate diagnoses.
  Technologies:

- .NET Core, C#, Entity Framework, SQL Server, REST APIs, Serilog, JWT, Git, Linux, Angular, html, css, bootstrap, SignalR.

TalabatAPI:

- The project was built using a 3-tier architecture that incorporated a generic repository and specification pattern, providing a modular and scalable solution.
- Error handling, validation, filtration, and pagination were all implemented to ensure a seamless user experience.
- Authorization and authentication were achieved through the use of JWT tokens.
- Integration with Stripe allowed for easy payment processing and caching services were used to optimize performance.
  Technologies:
- .NET Core, C#, Entity Framework, SQL Server, REST APIs, JWT, Git, Angular, html, css, Javascript, bootstrap, Stripe, Redux.
